

IS MALAYSIA READY FOR AN AGING POPULATION?

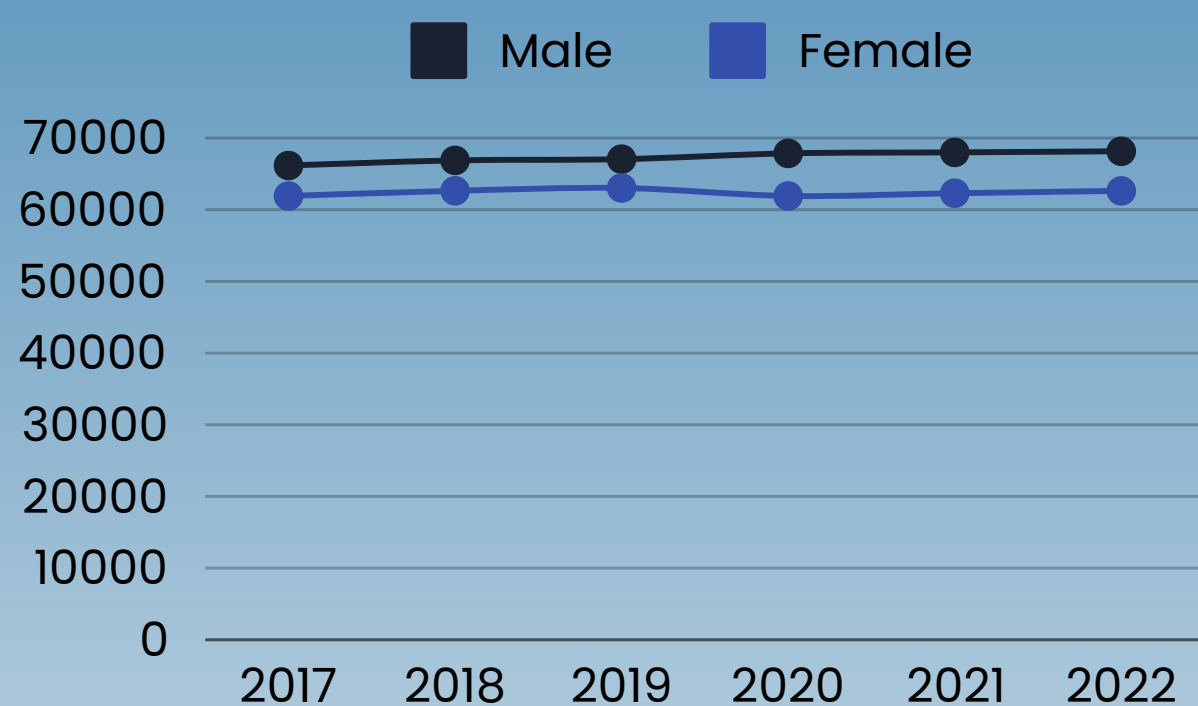

Aging Population

Population ageing is the rise in people aged 60+ and the decline in those aged 15 and below.

Conclusion

The population is increasing, but the birth rate is declining. COVID-19 initially raised the death rate, which has since decreased due to immunization efforts. If this trend continues for over a decade, the younger generation will gradually decrease, leading to an aging population. Healthcare facilities have grown by 1.8%, insufficient for the elderly's needs. With a minimum wage of RM 1,500 and household expenses of RM 2,600 to RM 4,500, people are hesitant to have more children and struggle to care for the elderly.
